Introduction

Nieuwkoop Europe is a leading trade name with a wide range of hydroculture products, green plants, silk plants, planters and exclusive decorations.

The company has operated in the green sector since 1968. Today, it is active in over 40 countries worldwide. The beating heart of the company is located in the Netherlands, just a few miles from Schiphol Amsterdam Airport and close to Royal FloraHolland, the famous flower and plants auction.

As the leading supplier, we focus on a complete range in high-quality products. We are committed to service. We understand immediately what you are looking for and we like finding suitable solutions together with you.

Actually, our pay-off „The Green Lifestyle®“ says it all.

One-Stop-Solution

Nieuwkoop Europe offers a full One-Stop-Solution. You can choose from a virtually complete range of products, from green plants and silk plants to planters and maintenance accessories.

The benefit is that you need just a single point of contact to quickly and conveniently buy all you need. It also saves you money, because a full package will reduce the transport cost instead of multiple suppliers.

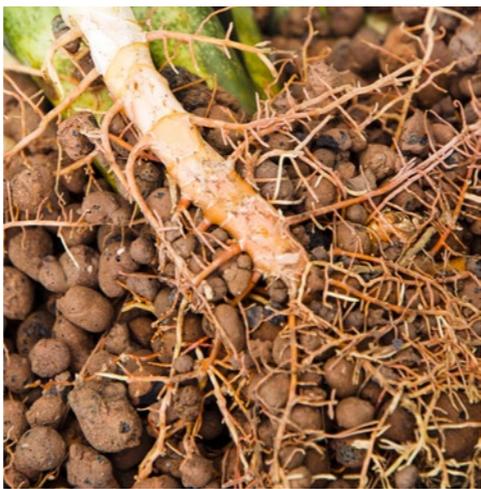

Hydroculture

Nieuwkoop Europe has been a specialist in hydroculture since way back. Hydroculture is a cultivation method of plants by growing their bare roots, clean from soil, in a layer of water.

A plant grown using hydroculture only needs water once every four weeks. This means that someone only needs to come along twelve times a year to look after your plants. You can see how much and when a plant needs water using a water meter. If the water meter shows 'minimum', wait three to four days before watering your plant again.

Thanks to the airy substrate consisting of hydro-granules, the roots are less sensitive to pathogens, mould and pests. Also, it allows the roots to take up sufficient CO₂ from the air around the granules for better growth. That enhances the health of the plant.

Soil plants

Nieuwkoop Europe offers a wide range of green plants from internal production. The plants are imported from production sites in the Netherlands and abroad, working closely with selected growers.

The range of plants is completed with green and flowering plants from various top suppliers.

Exclusive plants

These amazing plants, some several metres high, have come from all corners of the world. Nieuwkoop Europe is travelling more than half the year, just to select such special plants.

The plants are mainly used for major projects, such as zoos, tropical swimming pools, shopping centres, airports, hotels and large office buildings.

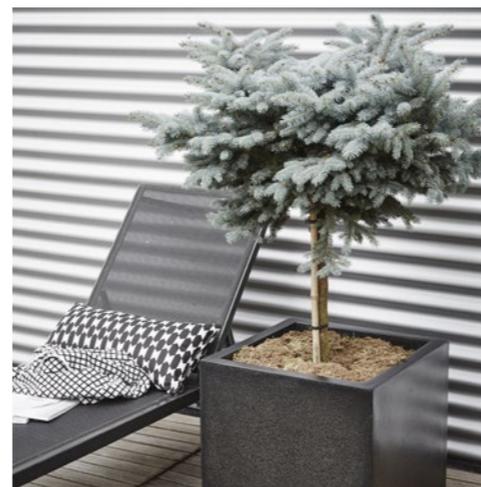

Terrace & Mediterranean plants

You can create a welcoming, fresh effect on any patio with these splendid outdoor plants.

The range comprises popular outdoor plants such as box and yew plants, pines and various exotic plants from the Mediterranean region, including citrus and olive trees.

Artificial plants

Have a closer look at our silk plants. Do you see the different shades of green and the natural details? Nieuwkoop Europe carefully selected a range of artificial flowers and plants for you based on the best quality. They are very hard to discern from the real thing.

Silk plants form a colourful and ambiance-enhancing alternative in spots where conditions prevent natural plant growth. Their popularity has increased dramatically over the past few years.

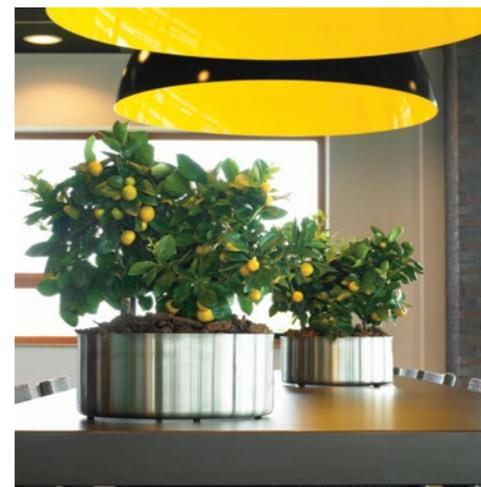

Synthetic planters

Synthetic planters are available in a wide range of shapes, sizes and colours. This is one of the reasons this group of planters are in high demand. The main benefit is the light weight of this material.

Metal planters

Modern and enchanting, but above all a remarkable example of craftsmanship. These beautiful planters can be custom-made to your personal wishes. This means that the planter can be supplied in any desired shape, height and width. The end result can be custom-painted in any RAL colour.

Ceramic planters

Ceramics can lend a classical or a modern appearance, which makes these planters very popular item. The material is solid, robust and fire-safe. This is an important characteristic in view of strict fire safety requirements in offices, shopping centres, hotels and other public spaces.

Ceramic planters are hand-made using traditional methods. This hand-made process makes each planter more or less unique. Did you know that the position in the oven ultimately determines the appearance of the ceramic planter? If a planter is positioned closer to the fire it will shrink more and the colour will be more intense. The temperature in these ovens is around 1,200 degrees Celsius.

Natural planters

Banana leaves, shells, tree bark, teak wood and Polystone - planters with a natural look are always appealing. Most of the planters are made by hand.

Custom Made Solution

Do you have specific wishes, such as planters in a specific colour? For example, the corporate logo colours of your client.

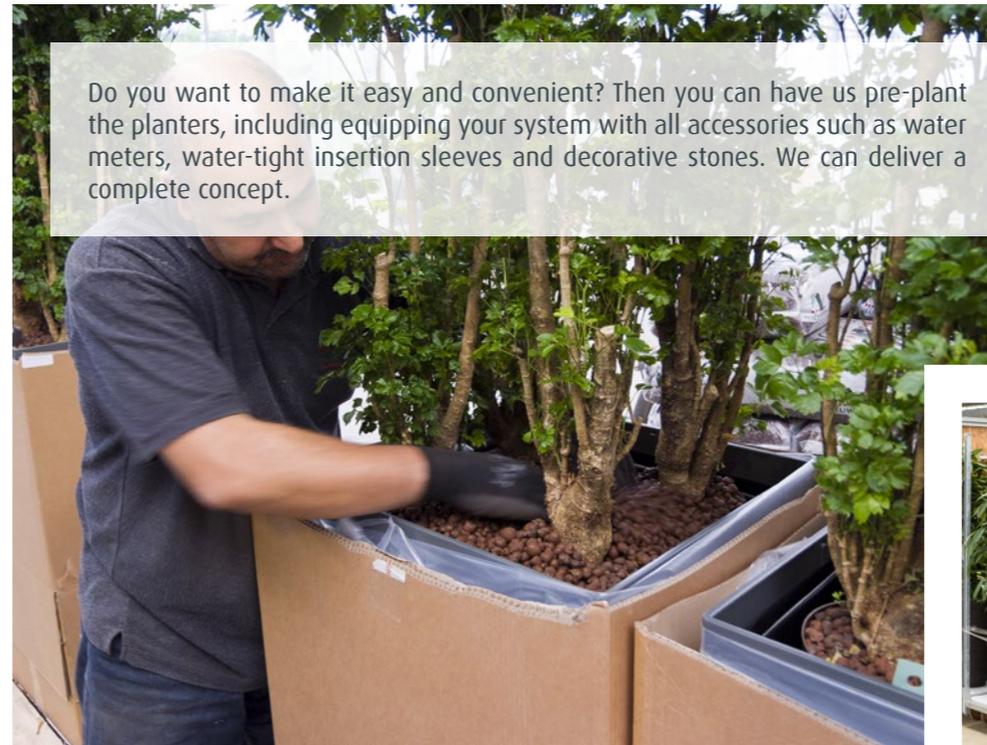

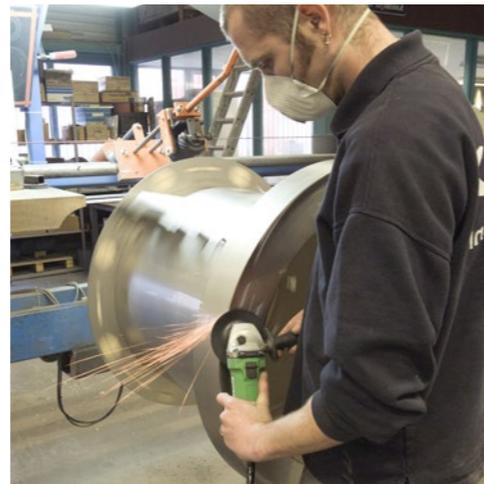

Nieuwkoop Europe has its own spray-paint cabin and professionally trained staff. This enables us to offer most plastic planters in any required RAL colour.

Today, planters are available in a wide range of shapes. Planters with a seat, or in a unique shape. The options are endless!

The stainless steel planters in the Superline® range can be fully customised. The products pass no less than ten pairs of hands for cutting, rolling, welding, coating and polishing. This means that the planter can be supplied in any desired shape, height and width.

Do you want to make it easy and convenient? Then you can have us pre-plant the planters, including equipping your system with all accessories such as water meters, water-tight insertion sleeves and decorative stones. We can deliver a complete concept.

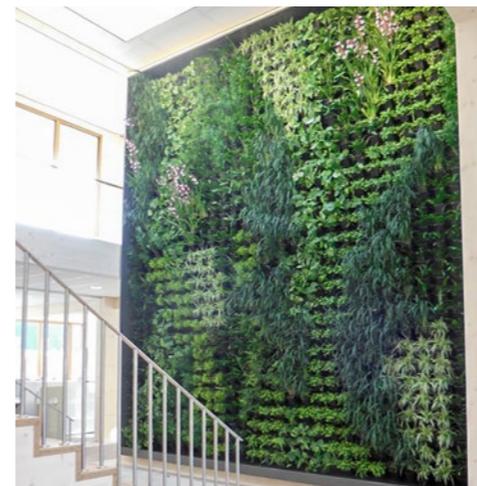

70.000 m² plants

Green walls

Living green on the wall is a resounding success! A green wall magically transforms bare walls into living green oases. Nieuwkoop Europe offers different systems; both indoor and outdoor, automatic watering or manual watering, custom or in a beautiful frame.

A green wall adds oxygen to the space, filters dust particles from the air and increases the humidity rate for a better indoor climate. The result is a stylish, pleasant, inspiring environment in which to work or host visitors.

Moss

Just like the ancient Egyptians, moss can be mummified. Mummification ensures longer preservation of the moss, without requiring light or water to feed the moss.

Moss is mummified by replacing its moisture content with an environmentally friendly, biodegradable preservative. The moss retains its flexibility and its natural smell and colour.

Dusting the moss from time to time is sufficient to retain its fresh colour. You don't need to do any more than that.

The mummified moss can be applied in many ways, such as on walls, in frames, in signage and in lettering. Be inspired by the wide range of options.

Accessories make it complete

A good product involves more than just a plant in a pots. Therefore Nieuwkoop Europe offers you all materials and tools that a professional interior landscaper need.

The range of accessories contains everything you could possibly need for the maintenance of your plants. You can always count on us to provide everything you need to comply with the highest quality and sustainability requirements.

Bespoke advice

Nieuwkoop Europe is a trusted supplier of plants for interior landscaping. We like to be creative in finding a solution for you. No idea is ever impossible!

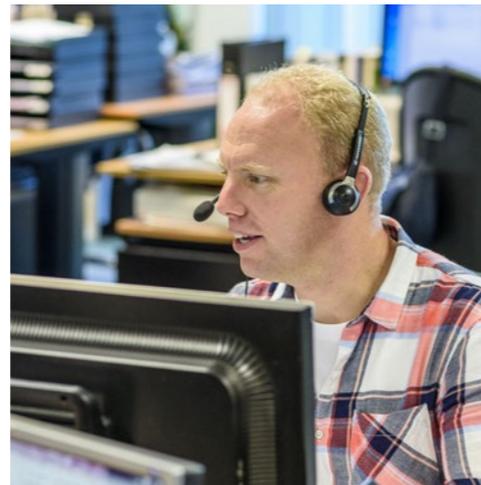

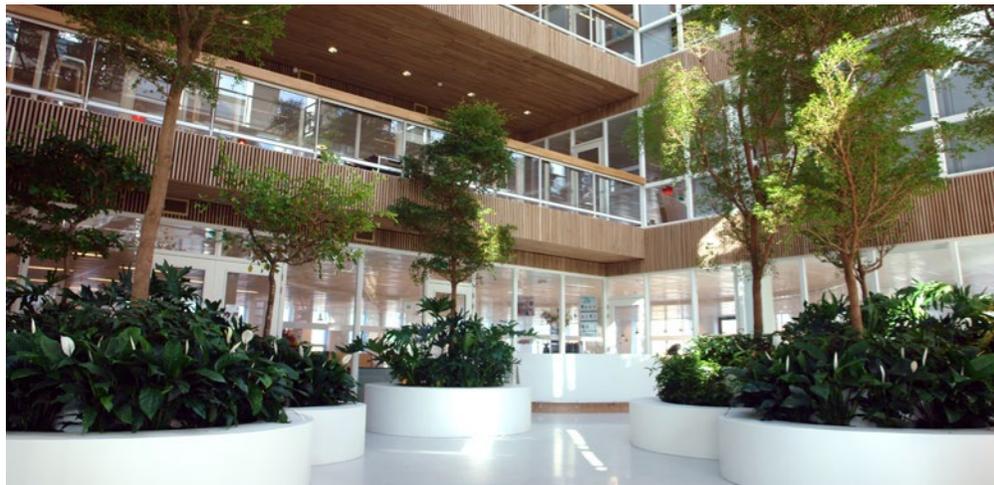

Our specialists are happy to assist you in specifying planting schedules. This may include advice on:

- The required daylight in the planned planting space
- The planting choice, types and sizes
- The soil or substrate type that the plants need
- The choice of planters that combine well with the plants
- Placing and transport of the plants

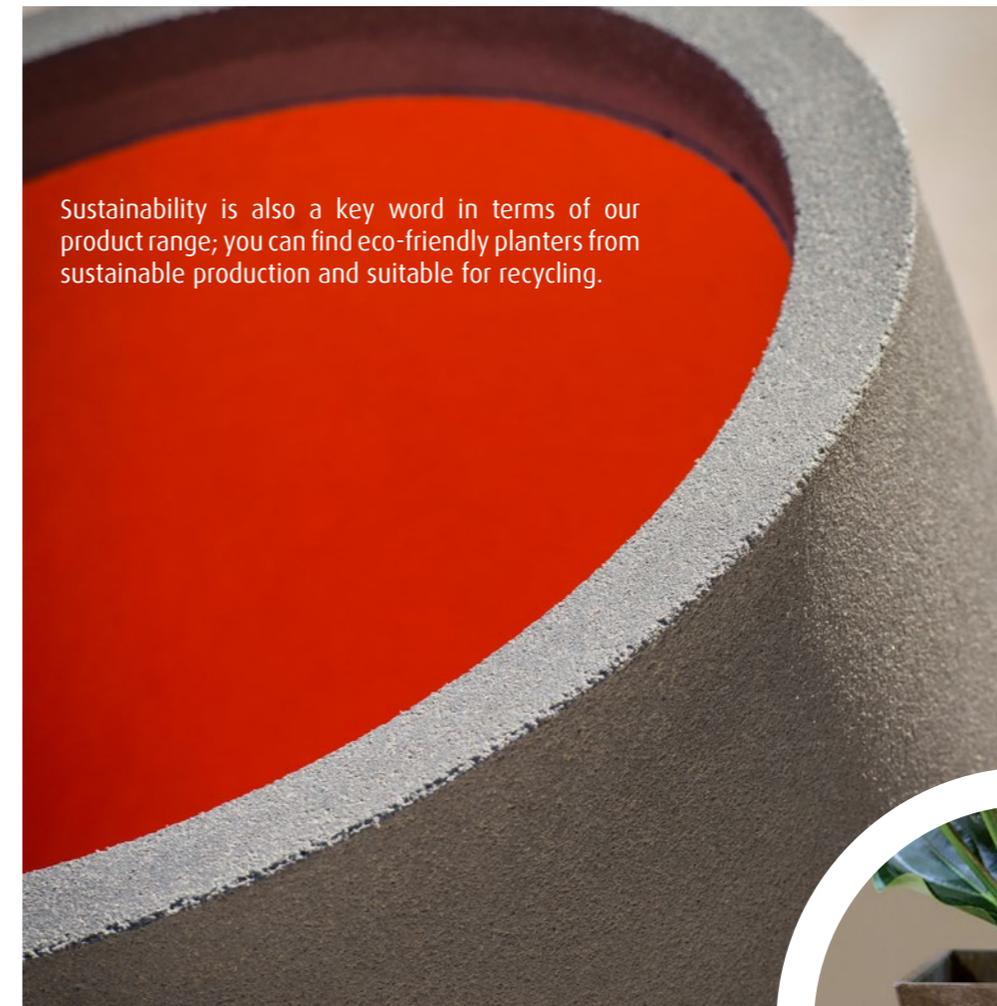

We will assist in your projects from the start to completion. From specifying planting schedules to solutions for complex logistics issues. Above all, Nieuwkoop Europe has extensive knowledge relating to transporting large plants and trees.

Sustainability

Nieuwkoop Europe B.V. took steps towards achieving sustainable business operations as early as 2008. Our mission is to guarantee our environmental performance and reduce our ecological footprint. We are proud of the certificates we were awarded relating to quality and environment policy.

Sustainability is also a key word in terms of our product range; you can find eco-friendly planters from sustainable production and suitable for recycling.

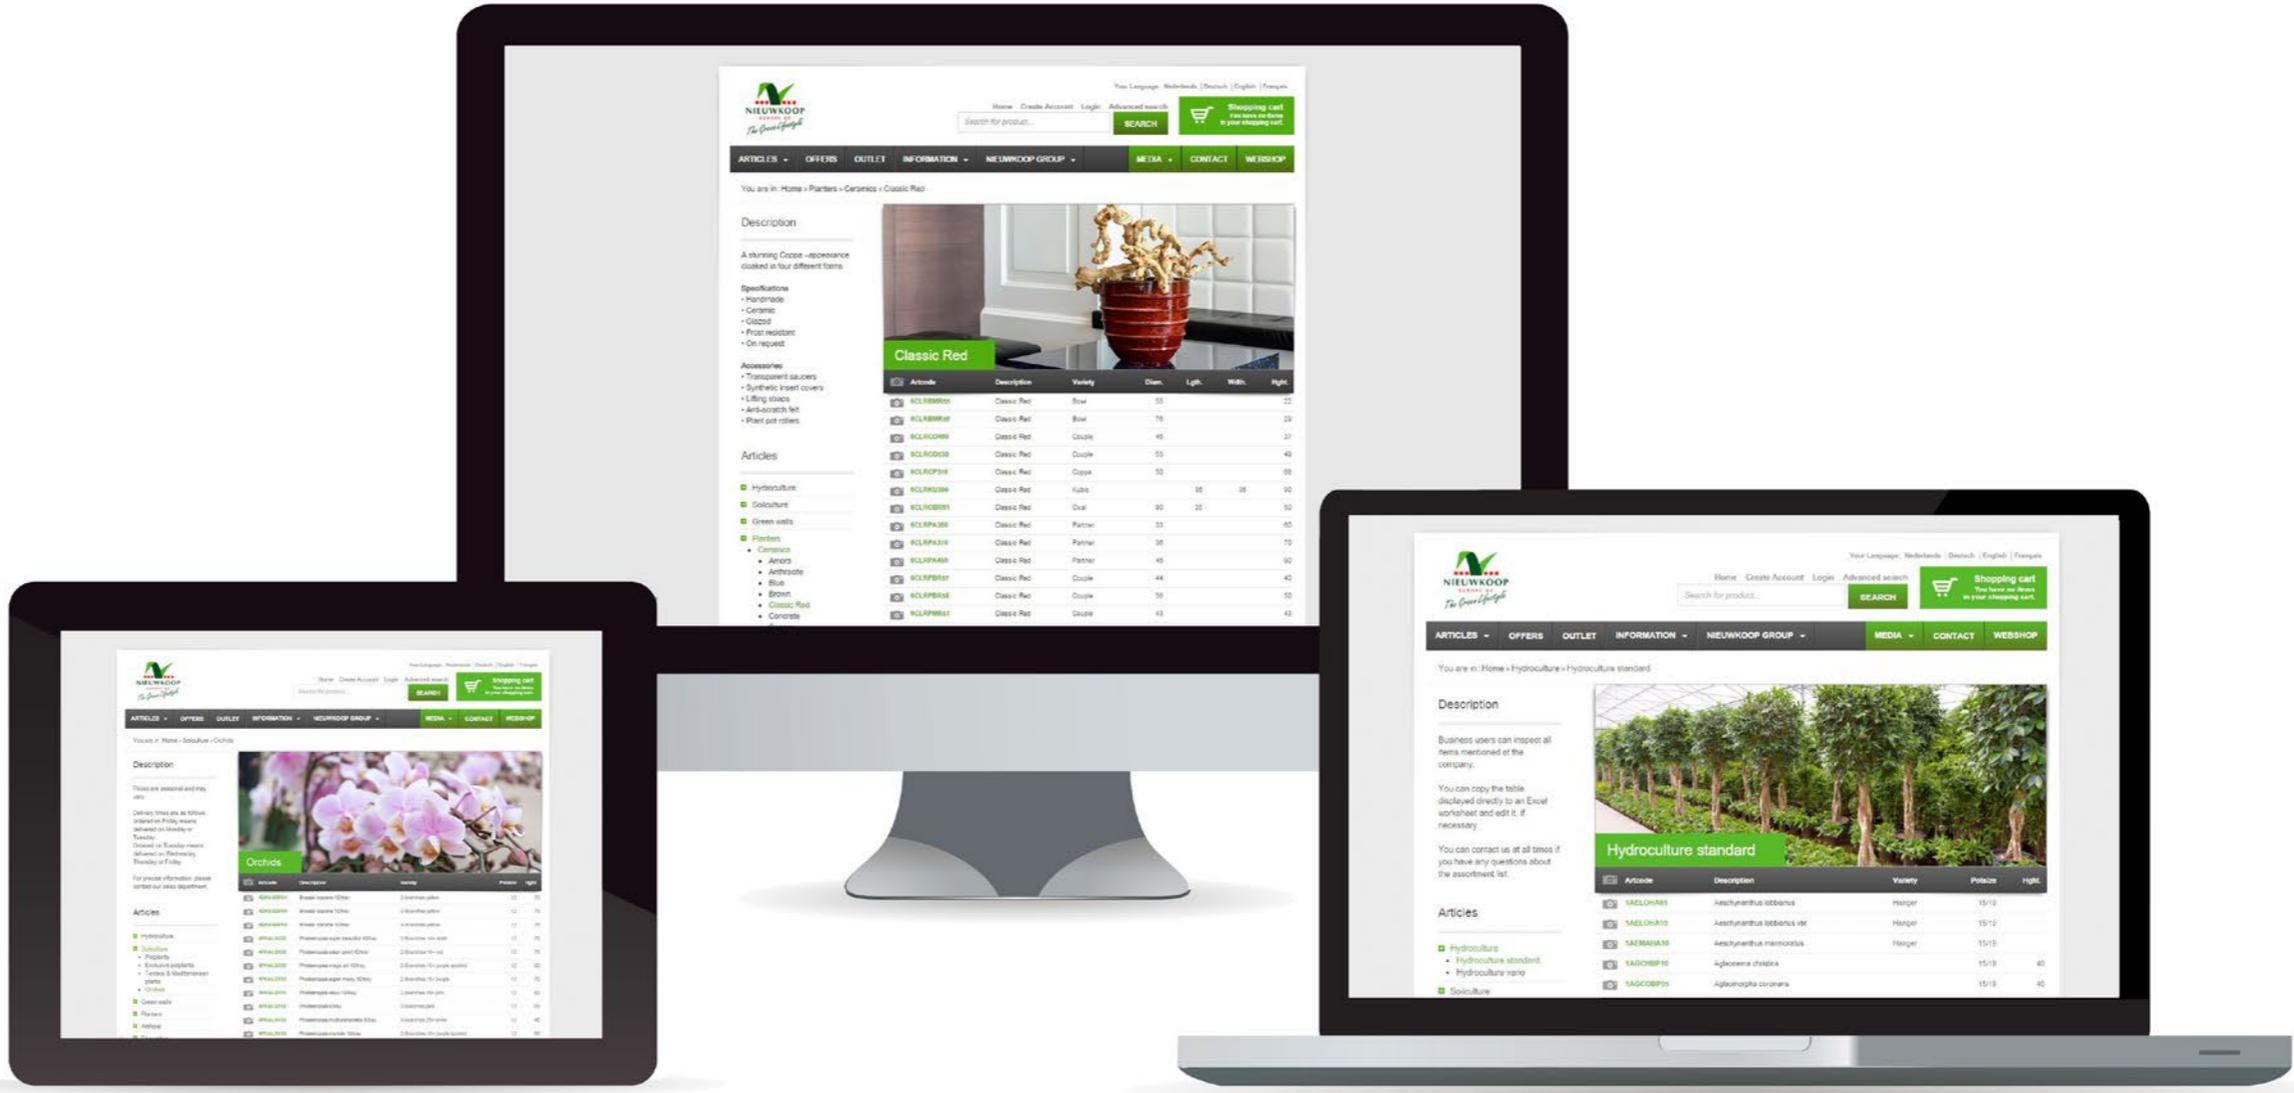

Webshop

You can place your online order quickly and easily at www.nieuwkoop-europe.com. So you can do business whenever and wherever you like!

In a single overview, you have all today's prices, stock levels, dimensions and product pictures.
