BAR BUCI - UAE

A sophisticated bar serving cocktails with a nostalgic jazz ambience, accompanied by breathtaking ocean views.

BRIEF

The client required a showstopping centrepiece olive tree that was both beautiful and would compliment the surrounding interior design. The tree would be located in the middle of a high-end seating area, creating an “Instagrammable” setting and promoting social media sharing. Guests could unwind and socialize with friends, family, and associates while enjoying a drink or two. Since the tree would serve as the space’s focal point, the canopy and height needed to be big enough to ensure it created a grand statement.

SOLUTION

After reviewing customer requests, we settled on a 5m finished height and 5m wide canopy for Bar Buci. We selected a unique olive trunk with a natural, gnarled appearance to maintain the luxurious ambience. This choice accommodates the space while supporting a substantial foliage, steel, and natural branch canopy. Safety is paramount in the commercial setting, so we opted for FireSilx FR olive foliage, which acts as a fire-retardant shield, automatically extinguishing flames on contact. The canopy clearance was set at 1.8m for unobstructed interactions to ensure customer comfort and safety.

OUTCOME

Our talented team in our Dubai TreeBuild factory manufactured the tree to perfection, ensuring it looked its best from every angle. We sent sign-off images to the customer for approval after meticulous final checks and adjustments. The installation went smoothly thanks to careful planning and collaboration with other contractors.

IKOS IBERIA - ANDALUSIA SPAIN

A beautiful modern hotel situated in Andalusia, Spain, known for its moorish architecture and sun-soaked shores.

BRIEF

Our customer's expectations were very clear. The request was for a large natural trunk olive tree that looked just like the real thing but required no maintenance or water. Although we are only a small team, we have a global reach, and we couldn't wait to get started on another project overseas working with such a fantastic new hotel.

SOLUTION

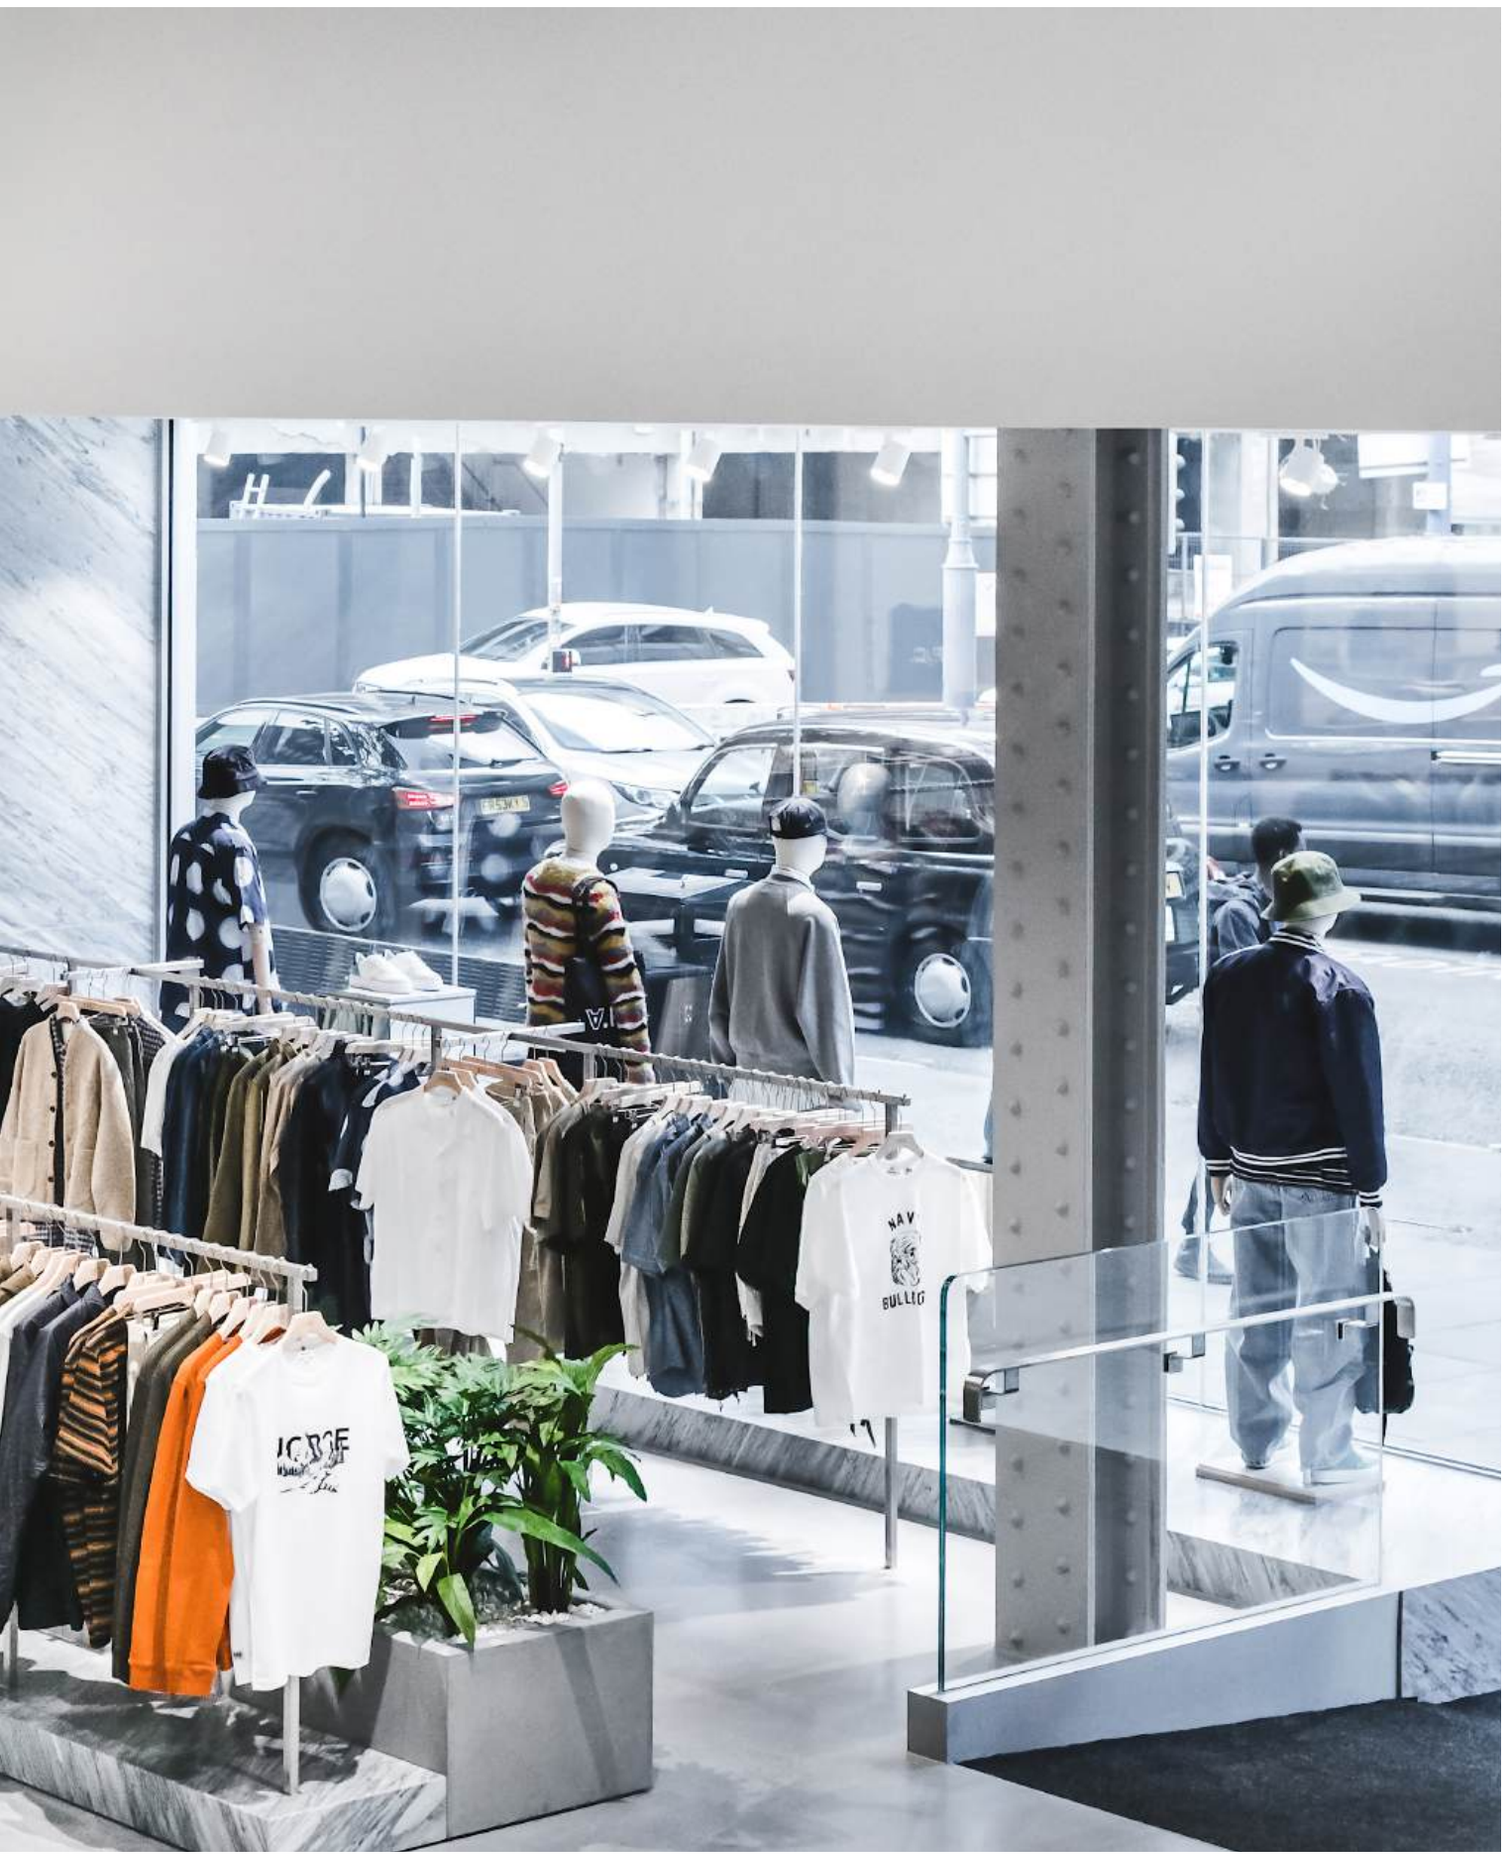

Taking images of trunks from our trunk stock, we sent multiple options to our customer. We wanted them to be part of the design process and ensure they were happy before we moved to the next stage. We always want our trees to look spectacular, so we spend time preserving the beautiful natural details live trunks have. Our FireSilx FR foliage was used to foliate the tree, ensuring that the tree is safe for use in the public setting.

OUTCOME

Once installed, the olive tree brought the space to life. It was the perfect addition to finish off the beautiful interior of the new hotel and very in keeping with the region that the hotel is in. We love to hear good feedback, and this occasion was no different. Our customer was delighted with the service and the product. We have since visited this fabulous hotel, and the tree still looks as great as it did when it left us.

FOUR SEASONS - BAHRAIN BAY

On an exclusive island in the heart of the Kingdom's capital, Four Seasons Hotel Bahrain Bay soars as a destination in its own right.

BRIEF

For the launch of Bahrain's new Four Seasons hotel, sizable artificial trees were essential for the lobby and outdoor balcony. Renowned for five-star opulence and unmatched hospitality, preserving the establishment's image was imperative.

SOLUTION

The customer wanted the trees to look as natural as possible, so we opted for natural olive trunks that we grafted limbs and a branch structure onto. Working with the customer, natural trunks were selected from a sustainably sourced farm. Custom baseplate risers were also required to fit the trees into custom planters that disguised air conditioning units. We used our premium FireSilx FR foliage for the internal trees, and so that we could be sure the colour would remain true for years to come, we went with our FireSilx FR & UVSilx colourfast foliage for the external trees.

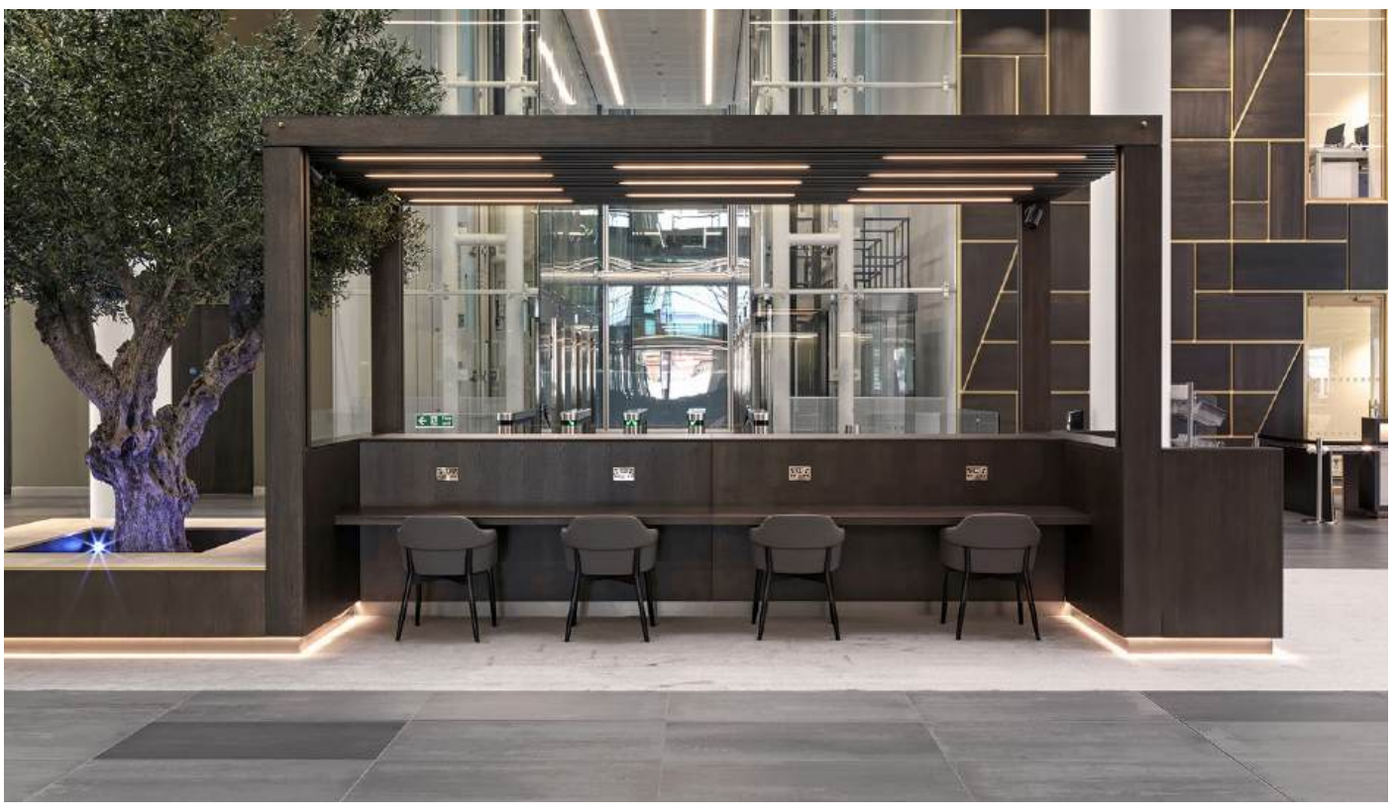

OUTCOME

The Four Seasons Bahrain is a truly impressive building! The lobby is breathtaking, and our top quality Arboretum olive trees fit in perfectly, only adding to this luxury space. The trees are 100% maintenance free, require no watering and will be around for years to come.

THREE SNOW HILL - BIRMINGHAM

Three Snowhill is a landmark office building at the gateway to the Birmingham Business District.

BRIEF

To manufacture and install an impressive, jaw dropping tree that compliments the beautiful, contemporary designed reception area with branches that intertwine the pergola next to it.

SOLUTION

Liaising with the ADT workplace, we carefully planned out the branch positioning. As this tree was sitting right beside the pergola, the aim was for the foliage to appear to grow naturally through it. We used a large natural olive trunk that we grafted limbs and smaller branches to form an impressive 4m canopy span. To ensure none of the beautiful natural trunk was hidden below the planter, the trunk was attached to a steel riser, meaning we could bring the trunk starting height up to where we desired it to be.

OUTCOME

This olive tree is a fantastic addition to the reception area. Being 4.5m high x 4m wide, it fills the space perfectly, creating a striking statement piece. The large natural trunk has beautiful features, creating a truly unique artificial tree.

BAB AL SHAMS - UAE

Bab Al Shams is a 5-star resort that combines contemporary flair with Bedouin heritage.

BRIEF

The project required trees that perfectly complemented the hotel's design and elevated its overall atmosphere. Artificial olive trees were the ideal choice, reflecting timeless beauty and symbolising longevity. A total of 23 olive trees were needed to create a cohesive ambience throughout the resort, including the lobby, spa, four restaurants, and three lounges.

SOLUTION

To achieve the desired aesthetic without environmental restrictions or maintenance, TreeLocate's sister company, TreeLocate Foliages was chosen to manufacture the trees and custom planters. We used natural, kiln-dried olive trunks ranging from 100 to 200 years old, paired with our ultra-realistic, inherently fire-retardant FireSilx olive foliage, to create incredibly lifelike replicas that are still steeped in character. The largest olive tree, standing 3 meters tall with a 2.2-meter canopy, became a focal point in the Mediterranean and Middle Eastern-inspired signature restaurant, Zala.

OUTCOME

After receiving client approval, we began manufacturing the trees in our tree build facility, conveniently located just 45 km from the resort. Clients are encouraged to make regular visits during the build process, enabling real-time adjustments. After final sign-off, the trees are disassembled, transported, and expertly reassembled on-site by our own team, ensuring a flawless installation every time.

THE HOUSE - UAE

The rich history of coffee, manifested in design.

BRIEF

According to interior design company C'est Ici, the brief for this project was to create a café with an ambience "as warm, grounded, earthy, and balanced as the perfect cup of coffee." This vision was masterfully brought to life through a minimalist aesthetic that embraces neutral, earthy tones and organic materials.

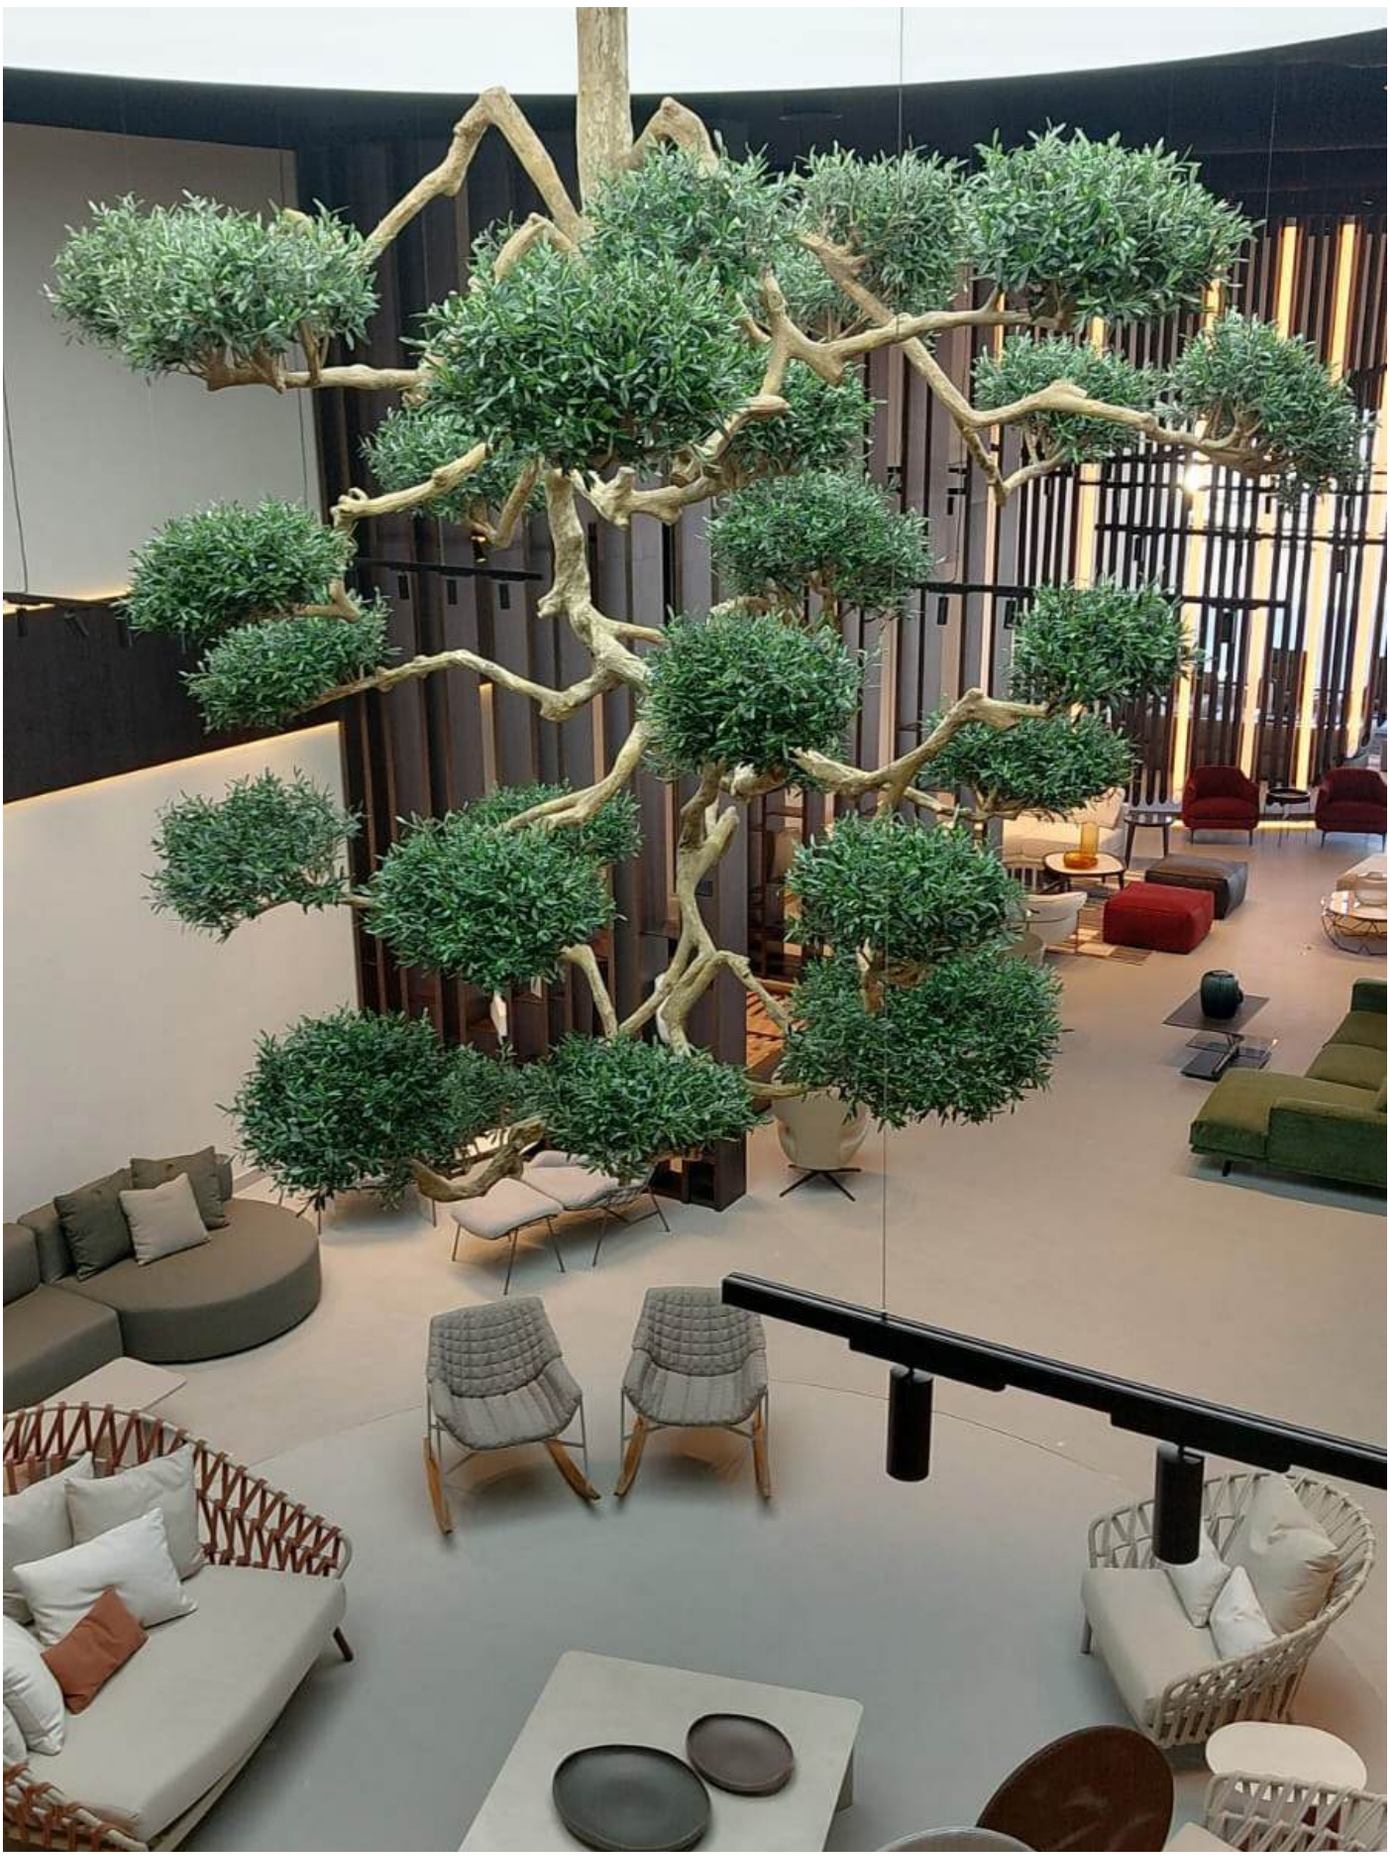

SOLUTION

The choice of the olive tree for this space was driven by its rich symbolism and natural elegance. Known for representing peace and timeless wisdom, the olive tree beautifully complements the calming and grounded atmosphere C'est Ici sought to achieve. Its presence enhances the café's earthy, serene ambience, imbuing the space with a profound sense of history and enriching the overall experience with its organic beauty.

OUTCOME

More than just a manufacturer, we provide expert design guidance on enhancing spaces with artificial greenery. For this project, we recommended a natural, gnarled olive trunk to reinforce the design narrative. Its slender, aged form seamlessly complemented the minimalist interior while infusing the space with unique character - something a younger tree simply couldn't offer.

THE CROFT HOTEL

The most beautiful place to Say “I do”

Nestled in North Yorkshire, The Croft desired to exude elegance and charm. The venue’s designer requested a stunning bespoke willow tree to serve as a striking centrepiece behind the altar. Alongside this, a selection of products to create a soft and neutral atmosphere. Tones of white and cream florals were suggested to create a vintage yet welcoming aesthetic, avoiding anything too bright from the vision.

Our collection perfectly aligned with the designer’s vision. Each element was thoughtfully chosen, from the delicate cherry blossom forming an intricate floral ceiling to the fresh faux hydrangeas decorating the aisle walkway.
The pièce de résistance was our bespoke willow tree, a 4.5m tall, neutral yet distinctive centrepiece that beautifully framed the altar. The tree’s unique design brought the brief to life, offering a stunning backdrop for couples exchanging their ever lasting vows.

CHARLTON HALL ESTATE

Boasting idyllic views of their private 150-acre country estate and interiors inspired by the Alice in Wonderland adage of being ‘entirely bonkers’.

At the core of Tempus, our thoughtfully curated array of artificial creations comes to the forefront, infusing charm into every nook and cranny. The allure of our tropical palm trees, with their swaying fronds, evokes a sense of escape, while vibrant wisteria gracefully adorning the walls introduces bursts of colours and textures that enliven the space.

The distinctive aspect lies in our incorporation of the FireSilx flame retardant range, seamlessly integrated into this creative medley. Amidst the aesthetic appeal, an unseen assurance embraces the environment, prioritizing not only beauty but also safety for every visitor at Tempus.

Our involvement in Charlton Hall’s journey holds profound local significance. Observing our creations seamlessly blend with the exquisite setting fills us with gratification. We’re genuinely excited to witness our products enhance the ambience of this remarkable space, reaffirming our commitment to adding a touch of magnificence to daily life.

NATURAL TRUNKS

Preserved natural wood, sustainably sourced

At the heart of our bespoke service is a commitment to manufacturing artificial trees that are not only visually stunning but also built to the highest standards. One standout feature of our process is the use of natural trunks, which bring an authentic, luxurious touch to every design.

We source our natural trunks from sustainable tree farms, reflecting our dedication to environmentally friendly practices. Each trunk undergoes a careful kiln-drying process to preserve its beauty, prevent decay, and retain its original character.

Olive trunks are often a preferred choice for their timeless appeal, but we work with a wide variety of species to meet the specific needs of each project. From intricate detailing to bold, statement designs, every tree is created to fit the client's brief perfectly.

To further enhance the trunks, we use a specialised painting technique developed through years of experience. This process highlights the original beauty of each trunk while accentuating its features, resulting in a truly bespoke piece.

To complete the look, we offer an extensive collection of premium foliage, allowing clients to choose the perfect finish for their design. Whether it's the charm of an olive tree or the delicate blush of a cherry blossom, we ensure the tree you envision is the tree you receive.

ARBORETUM

Premium Fabricated Trees

Our Arboretum range offers bespoke artificial trees made to the highest standards using only premium materials. Built in both the UK and UAE, these trees combine sustainably sourced natural elements, custom-made steel frameworks, and top-quality FireSilx foliage for a flawless finish.

Designed to last, Arboretum trees are not only durable but also remarkably lifelike, making them nearly indistinguishable from living trees.

Choosing an Arboretum tree means every detail is tailored to your vision. Working closely with you and your brief, we ensure each design is carefully planned and perfectly executed to create a truly bespoke piece.

While our natural trunks remain a highly recommended option and are admired by many, Arboretum trees offer unmatched flexibility, making them the perfect choice when design versatility is key.

HAND-BUILT TREES BY SKILLED ARTISANS
Arboretum replica trees are built carefully by highly skilled artisans in the UK and UAE.

HYPER REALISTIC MUSEUM GRADE REPLICAS
Extreme attention to detail in every process guarantees a like-for-like.

FIRESILX FIRE RETARDANT FOLIAGE
Arboretum Trees are only ever foliated with FireSilx FR foliage, ensuring safety to guests, customers and businesses.

SUSTAINABLY SOURCED NATURAL MATERIALS
All natural trunks and branches come from sustainably managed tree farms from around the world.

GIANT STEEL TREES WITH STRONG INTERNAL SUPPORT
Arboretum trees are manufactured to be just as strong as real living trees, using engineered steel structures that have been structurally signed off.

INCREDIBLY DETAILED, ALWAYS
Even when observed up close, Arboretum trees are difficult to tell apart from the real thing. Thanks to our meticulous attention to detail.

PREMIUM FABRICATED TREES

FIRESILX

Inherently Fire Retardant Foliage

FireSilx is an international brand of commercial grade inherently flame retardant artificial foliage, used and trusted by professionals worldwide.

Manufactured using inherently flame retardant materials and chemicals, FireSilx foliage is inherently flame retardant and designed to self-extinguish. FireSilx products are never post-sprayed or dipped, so Firesilx FR properties will never wash off or dissipate over time; that is why we guarantee and warrant all FireSilx products for life.

FireSilx foliage is rigorously and regularly tested in our in house fire chamber to ensure every batch passes our stringent tests, but more importantly, tested and certificated at numerous international testing laboratories worldwide. FireSilx is compliant in all jurisdictions and has passed more safety tests than any other supplier.

An impressive bank of authorised certifications - constantly growing and updated is available to view, and with every FireSilx order comes all relevant certificates.

INHERENTLY RETARDANT
FireSilx Foliage is meticulously manufactured with fire retardant materials.

GUARANTEED FOR LIFE
The entire FireSilx FR range comes with a lifetime warranty for its IFR properties.

OFFICIAL FR CERTIFICATION
With every FireSilx order, official fire standard certification is supplied.

REAPPLICATION AND REPROOFING ARE NEVER REQUIRED
FireSilx foliage is inherently fire retardant, and there is no need for costly annual reproofing.

FireSilx

UVSILX

Colourfast Foliage

UVSilx is an international brand of artificial exterior grade foliage that has been designed for external uses.

UVSilx offers ultraviolet protection and resistance to the colour-damaging effect of extreme heat and direct sunlight. Manufactured with the same premium technical qualities as our FireSilx products. UVSilx has a UV inhibitor added at the time of manufacture. As a result, all products are tough, fade resistant, and capable of withstanding significant variations in temperature and climate conditions.

You'll find UVSilx products in external environments, standing the test of time worldwide. UVSilx products are tested to ISO 489-3 and ASTM G154-12a. Official certification is available on request.

EXTERNAL GRADE FOLIAGE
UVSilx foliage has been specially designed and developed to be used externally.

FADE RESISTANT
UVSilx foliage is guaranteed to remain true to colour, even when exposed to direct sunlight.

WITHSTAND HIGH TEMPERATURES
UVSilx foliage will remain true to form and colour even when used in the hottest climates.

LIFELIKE FAUX PLANTS & FOLIAGE
UVSilx foliage is designed and manufactured to be botanically accurate.

TOUGH & DURABLE
To be sure the products can be used in exterior locations, special measures have been taken to strengthen and weatherproof the foliage.

UVSilx

FAQ'S

Frequently Asked Questions

ARE YOUR BESPOKE TREES FIRE RETARDANT?
If you require your tree to be FR, then yes, we can make sure it is. We use foliage from our FireSilx FR range, which has been tested to meet worldwide FR standards. Our natural trunks have been preserved, and all fabricated trunk options are manufactured with fire retardant materials.

WHAT IS YOUR LEAD TIME?
Lead time depends on the project in question and our schedule; however, we typically aim for a four-week turnaround from the sign-off stage. We can provide a more accurate delivery date when orders are placed and update you.

CAN YOU HELP ME DESIGN A TREE?
Our team are more than happy to help design your tree. We ask for some basic information, height, canopy span and species, and then our talented in house designers can create some initial concepts to get the ball rolling.

DO YOU INSTALL BESPOKE TREES?
In most cases, our bespoke trees have been designed so that assembly on site is simple and straightforward for anybody to do. Installations can be arranged for more complex projects, or if you feel you would rather have our team do it.

ARE THERE ANY LIMITATIONS ON THE TREES YOU CAN MAKE?
We offer a wide range of foliage for bespoke trees, with two trunk styles: natural and fabricated. Natural trunks preserve the unique characteristics, while fabricated trunks provide maximum flexibility and customisation. We would love to check out your brief if you aren't sure which is right for your project
